

#### מטרת הפרויקט

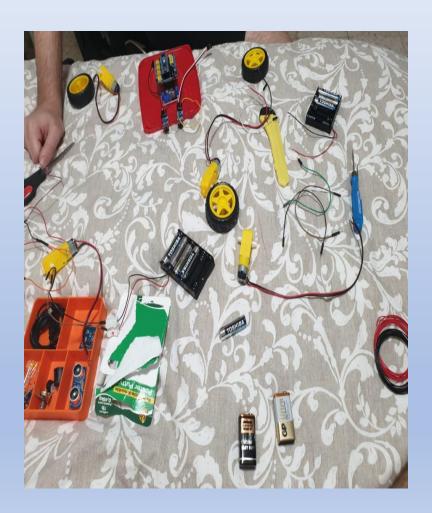

<u>רובוט עוקב קו</u>: רובוט שמתקדם פחות או יותר על תוואי קו פשוט שניתן מראש.

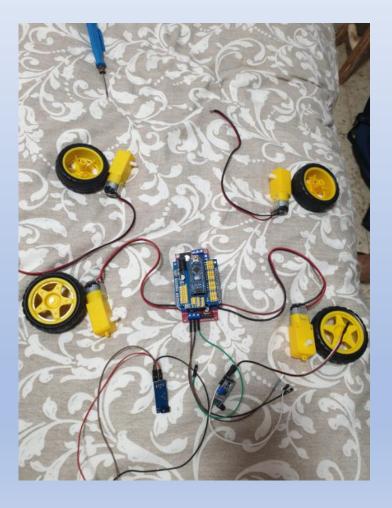

אילוצים (1: הנעת הרובוט ללא רכיב שמסתובב סביב עצמו ונוגע בקרקע.) הנעת הרובוט לא מתבצעת ע"י הנעת זחילה פשוטה.

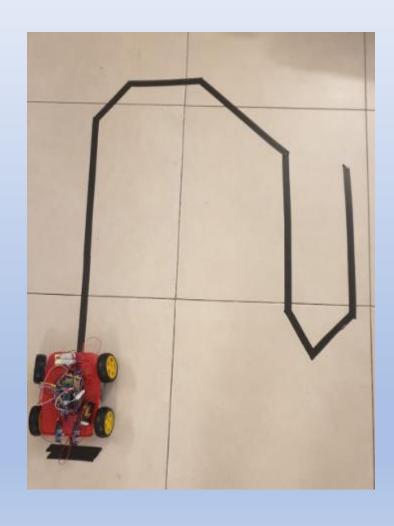

### אבטיפוס

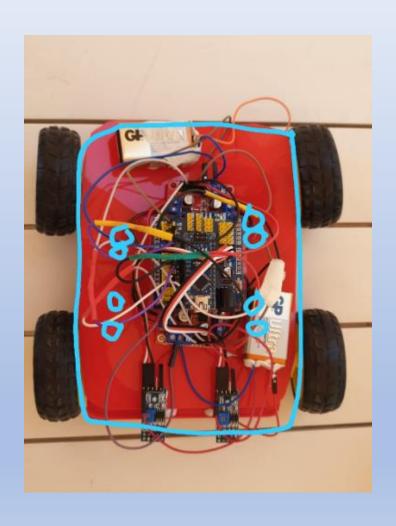

## אבטיפוס

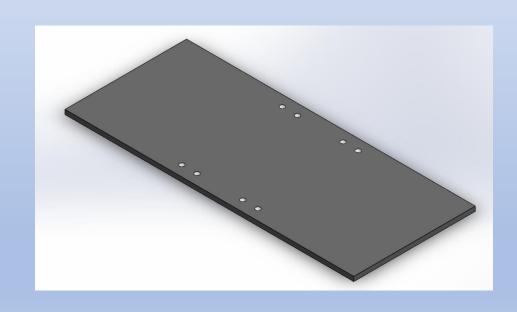

## אבטיפוס

# חיתוך באמצעות לייזר

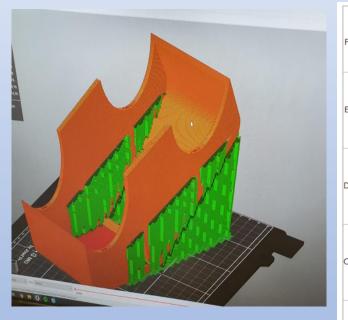

. הבסיס לרובוט: חיתוך בלייזר במידות 19 ס"מ אורך, 8 ס"מ רוחב ו-8 חורים בקוטר 3 מ"מ

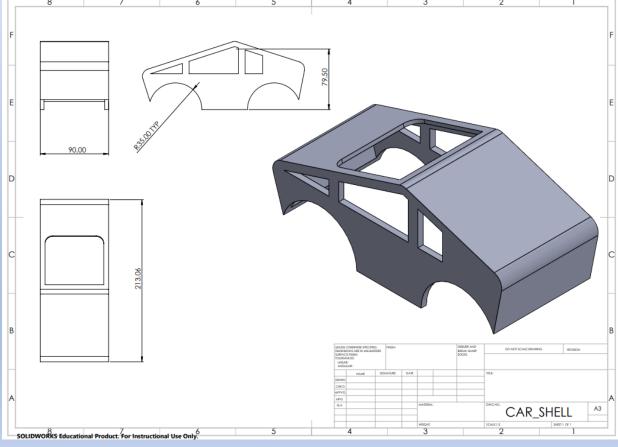

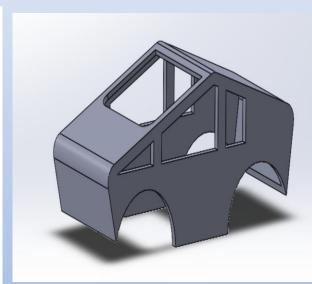

# הדפסה בתלת מימד

: את המכסה למכונית החלטנו ליצור בעזרת הדפסת תלת מימד

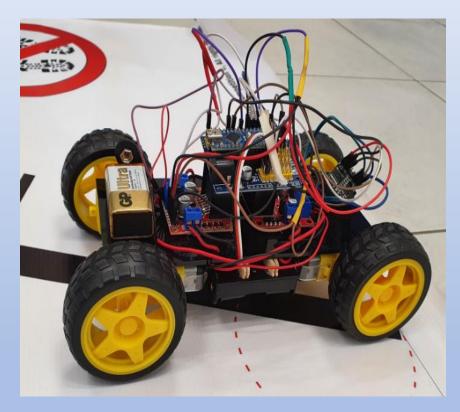

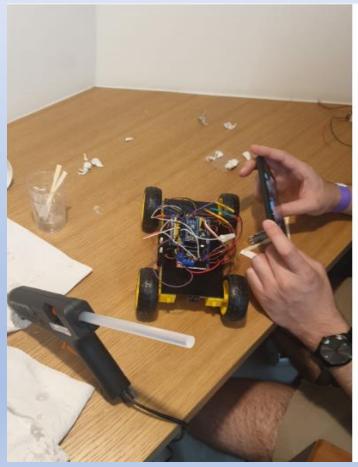

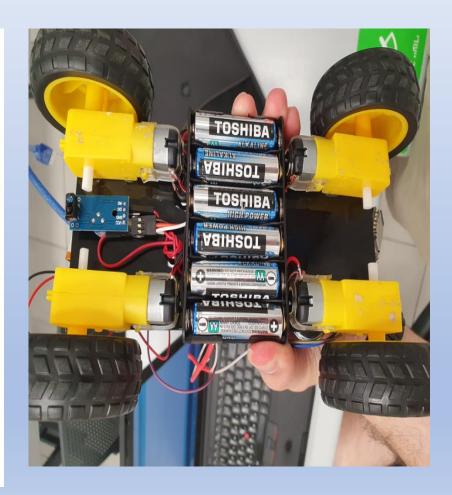

#### וזאת התוצאה:

# המכונית שלנו

#### Code

```
#define WhiteBlackBorder 250// extualy border minus 50
#define MaxBorder 60
int EN A = 5;
                  //Enable (PWM) pin for first motor
int IN1 = 7;
                  //control pin for first motor(Left motor)
int IN2 = 2;
                   //control pin for first motor (Left motor)
                   //control pin for second motor (Right motor)
int IN3 = 4;
int IN4 = 8;
                  //control pin for second motor (Right motor)
                  //Enable (PWM) pin for second motor
int EN B = 6;
|void setup() {
 pinMode(EN_A, OUTPUT);
 pinMode (EN B, OUTPUT);
 pinMode(IN1, OUTPUT);
 pinMode(IN2, OUTPUT);
 pinMode(IN3, OUTPUT);
 pinMode(IN4, OUTPUT);
 Serial.begin(9600);
 // -----
 digitalWrite(IN1, LOW); // Disable both motors
 digitalWrite(IN2, LOW);
 digitalWrite(IN3, LOW);
 digitalWrite(IN4, LOW);
 delay(2000);
 analogWrite(EN A, 180); // Set the speed of both motors to 200 (But motors are disables at the moment!)
 analogWrite(EN B, 180);
/* Rottate the car in its place
     digitalWrite(IN1, LOW); // Set motor A (Left) Disable
     digitalWrite(IN2, HIGH);
     digitalWrite(IN3, HIGH); // Set motor B (Right) forward
     digitalWrite(IN4, LOW);
     delay(5000);
     digitalWrite(IN1, HIGH); // Set motor A (Left) forward
     digitalWrite(IN2, LOW);
     digitalWrite(IN3, LOW); // Set motor B (Right) Disable
     digitalWrite(IN4, HIGH);
     delay(5000);
     digitalWrite(IN1, LOW); // Disable both motors
     digitalWrite(IN2, LOW);
     digitalWrite(IN3, LOW);
     digitalWrite(IN4, LOW); */
```

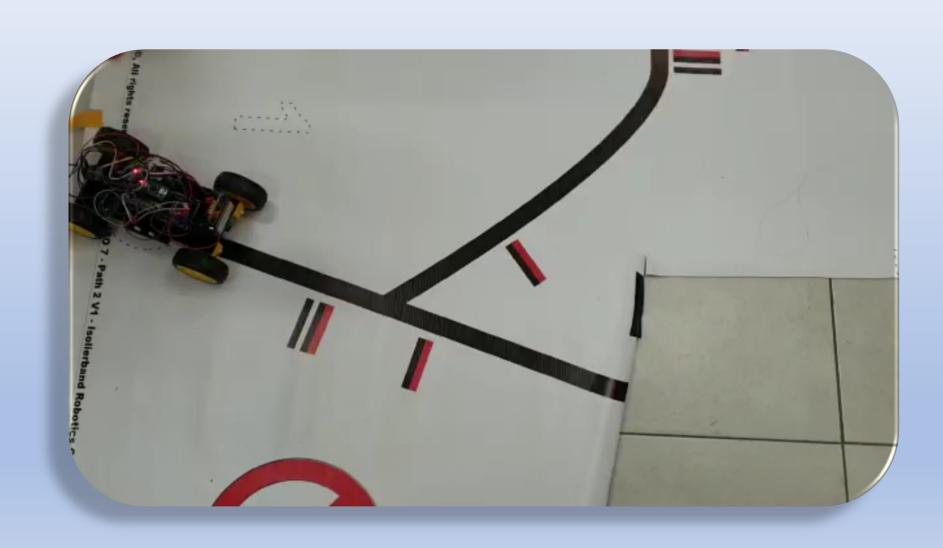

```
lvoid loop() {
  // put your main code here, to run repeatedly:
  if (analogRead(A1)>WhiteBlackBorder-MaxBorder&&analogRead(A1)<WhiteBlackBorder+MaxBorder)// forward
      analogWrite(EN_A, 80); // Set the speed of both motors to 100
      analogWrite(EN B, 80);
      digitalWrite(IN1, HIGH); // Set motor A (Left) forward
      digitalWrite(IN2, LOW);
      digitalWrite(IN3, HIGH); // Set motor B (Right) forward
      digitalWrite(IN4, LOW);
   /* if(analogRead(A1)>WhiteBlackBorder&&analogRead(A1)<WhiteBlackBorder+20)// turn left
      digitalWrite(IN1, LOW); // Set motor A (Left) Disable
      digitalWrite(IN2, LOW);
      digitalWrite(IN3, HIGH); // Set motor B (Right) forward
      digitalWrite(IN4, LOW);
    if(analogRead(A1)<WhiteBlackBorder&&analogRead(A1)>200)// turn right
      digitalWrite(IN1, HIGH); // Set motor A (Left) forward
      digitalWrite(IN2, LOW);
      digitalWrite(IN3, LOW); // Set motor B (Right) Disable
      digitalWrite(IN4, LOW);
    if(analogRead(A1)>WhiteBlackBorder+MaxBorder)// turn left on spot
      analogWrite (EN A, 250); // Set the speed of both motors to 180
      analogWrite(EN B, 250);
      digitalWrite(IN1, LOW); // Set motor A (Left) reverse
      digitalWrite(IN2, HIGH);
      digitalWrite(IN3, HIGH); // Set motor B (Right) forward
      digitalWrite(IN4, LOW);
    if (analogRead (A1) < WhiteBlackBorder-MaxBorder*0.75) // turn right on spot
      analogWrite (EN A, 250); // Set the speed of both motors to 180
      analogWrite(EN B, 250);
      digitalWrite(IN1, HIGH); // Set motor A (Left) forward
      digitalWrite(IN2, LOW);
      digitalWrite(IN3, LOW); // Set motor B (Right) Disable
      digitalWrite(IN4, HIGH);
//Serial.print("A0:");
//Serial.println(analogRead(A0));
Serial.print("A1:");
Serial.println(analogRead(A1));
```

## פיספוסים

## תוצאה סופית

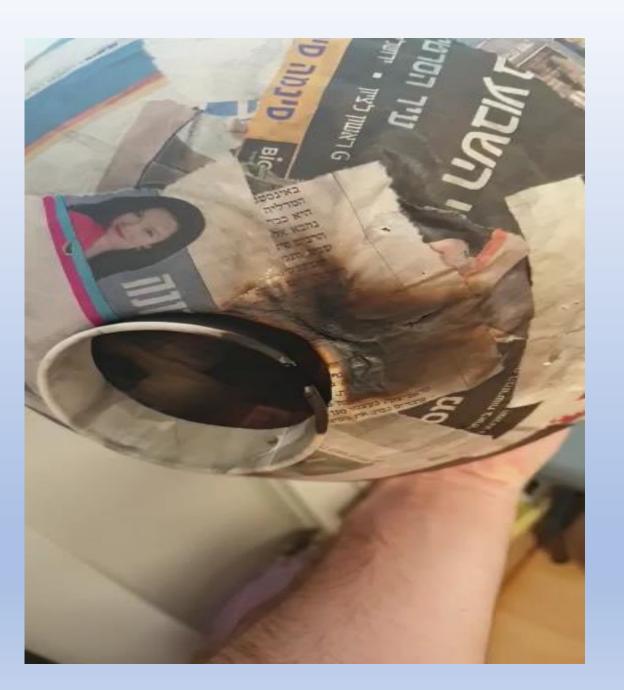

# פרויקט נוסף, שלא צלח.

ניסינו ליצור כדור פורח

#### תוצאה:

## תודה רבה
